

Stubbe's Precast Case Study

About Stubbe's

Stubbe's Precast (Harley, Ontario, Canada) is a structural, architectural and agricultural precast producer with over 30 years of experience. They offer products such as hollow core flooring, wall panels, beams, columns, double tees and other precast products for the Ontario building market. Their specialty is in combining these products to offer a total precast structure.

Notable Projects

The below projects were created using Stubbe's Total Precast Construction.

- Alma College
- ArtHaus Project
- Premier Equipment Ltd.

Stubbe's uses Idencia OneSource™ to automate quality control

Challenges

At Stubbe's Precast, dependability is one of their core values. Meaning that superior quality control (QC) practices are in the company's DNA and are key to supporting their reputation.

To be able to continue to provide top-notch quality control and be able to present that information to their customers, Stubbe's needed a solution that could help them streamline their processes.

Requirements for the proper solution included:

Easier way to collect QC data

Simpler way to prepare QC reports

Better traceability of non-conformance and visibility into QC data

Idencia OneSource + Stubbe's = Success

Idencia OneSource is the perfect solution for the challenges that Stubbe's faced. OneSource is able to address their needs and is now a key component in their continued success. This solution is able to help them with:

Digital records

Products, materials and concrete tests are recorded by scanning serial numbers. Scans and QC data are entered into OneSource and the data is maintained in Stubbe's web-hosted account for future reference.

Streamlined QC process

The QC process has improved with the inclusion of the records of the materials used. Reference pictures are taken of the product labels. Then, all of this data is easily accessed later with search.

ERP and ForneyVault integrations

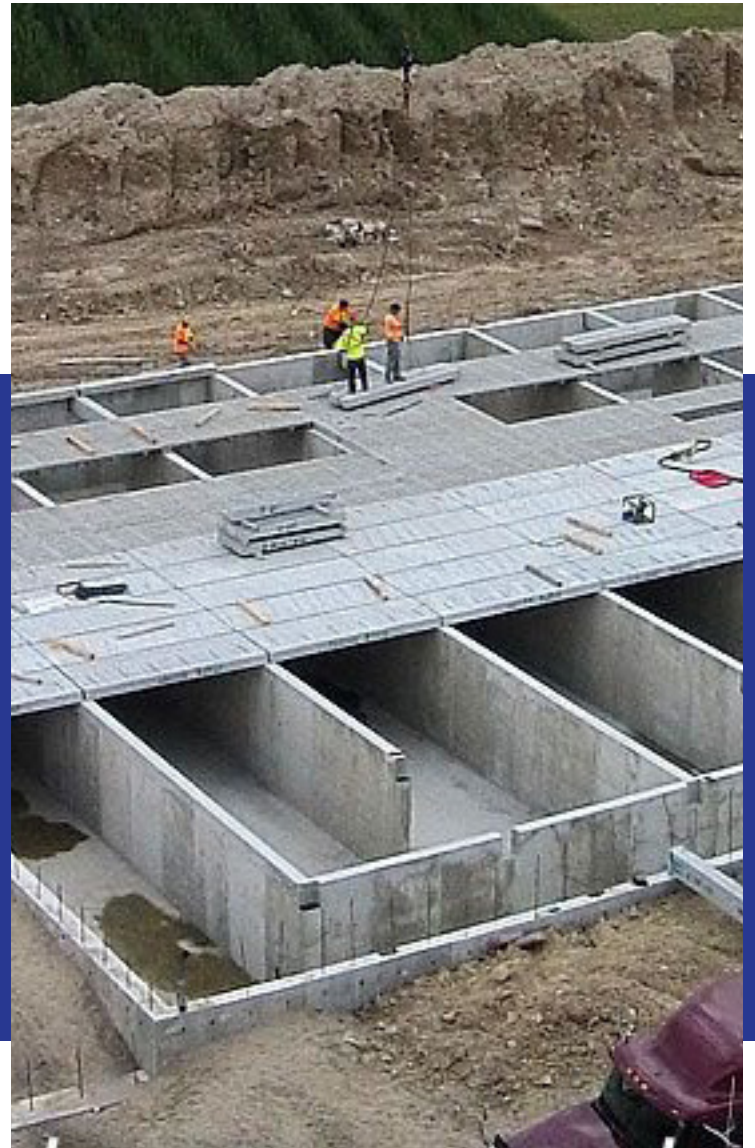

Idencia is actively developing an integration with Stubbe's ERP system to result in plant data being accessible in both tools. Additionally, Stubbe's is able to pull all cylinder strength data into OneSource thanks to its integration with ForneyVault.

Concise record history

With OneSource, Stubbe's is able to document issues and record a complete history of their resolutions with data, pictures and signatures. Now, all records are easily found online and not tucked away in a filing cabinet.

Easy access information and reports

OneSource auto-generates customized QC reports. All QC information is instantly available in the required format which is easily accessible through direct links in OneSource.

Customer testimonials

"The program is easy to use and very flexible. We're able to customize it to our needs and processes."

"Our experience has been quite good. Idencia is very responsive. When there are issues they always respond quickly."

— Steven Van Wyk, Quality Assurance Manager

"We are integrating Idencia [OneSource] with our ERP system and ForneyVault to reduce redundant data entry and improve data accuracy. This saves time and improves the quality of results."

— Trevor Van Lagen, Business Intelligence Analyst
